CS97 Academic Honesty Policy
Fall 2017

1. Unless stated otherwise, each student must turn in his/her own homework assignment. The code in this assignment must be your code; the words must be your words. One consequence of this rule: **If you cannot explain your assignment to me (why you did it the way you did, how it works, etc.), then you have violated our policy.**

2. You can learn a lot from others in the class, and other people in general, and I encourage you to do so. Therefore, you are allowed to talk to others about the course content. You may also talk to others about assignments, but **you should never see another student's answers and you should never show your answers to anyone else or post your code in a public place**, such as Piazza or Github, either now or in the future.

   Further, you must list the people with whom you interact at the top of your assignment. One consequence of this rule: You cannot violate the policy by listing names, only by omitting names.

3. You are also allowed to use resources such as books or the Web. Again, you must simply list these resources at the top of your assignment. However, **you may not search for solutions to the homework problems**.

The policy is enforced by both manual and automated analysis of your homework submissions. **All policy violations are reported to the Dean**, who does a full investigation and determines appropriate punishment.

I have read, understood, and agreed to abide by this policy.
